

PHASE I ENVIRONMENTAL SITE ASSESSMENT

1926 S. Laramie Avenue Cicero, Illinois 60804 Cook County

Prepared for:

Town of Cicero 4949 West Cermak Road Cicero, Illinois 60804

December 7, 2009

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

EXECUTIVE SUMMARY

K-Plus Environmental has completed a Phase I Environmental Site Assessment (ESA) of the industrial property that is located at 1926 South Laramie Avenue in Cicero, Illinois. The Subject Property is approximately 0.82 acres in size and is currently developed with a two-story building finished with offices and a production building occupied by Defender Door Company. Based on the findings and observations made during this ESA, K-Plus identified the following Recognized Environmental Conditions (RECs).

- Hazardous substances were noted as used and stored in the building at the Subject Property.
- The Subject Property has been utilized for industrial purposes since its development.

Further investigation of the Subject Property would be necessary in order to determine what, if any, impact the current and historic industrial operations have had on the subsurface of the Subject Property.

1.0 INTRODUCTION

K-Plus Environmental LLC (K-Plus) was retained by the Town of Cicero (Client) to conduct a Phase I Environmental Site Assessment (ESA) of the industrial property located at 1926 South Laramie Avenue in Cicero, Illinois (Subject Property).

1.1 Purpose

This Phase I ESA was completed in order to provide an objective, independent, professional opinion of the possible presence of Recognized Environmental Conditions (RECs) or other possible environmental concerns (if any) associated with the Subject Property as part of environmental due diligence.

As defined in ASTM E 1527-05, the term *Recognized Environmental Condition* means "...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property." In addition, the term *Historical Recognized Environmental Condition* means "... an environmental condition which in the past would have been an REC, but which may or may not be considered a REC currently." Performance of the Phase I ESA was intended to reduce, but not eliminate, uncertainty regarding the existence of Recognized Environmental Conditions in connection with the Subject Property.

The objective of this assessment is to perform a due-diligence and all appropriate inquiry regarding the environmental condition of, and assess potential liability for any contamination on the site in order to satisfy Landowner Liability Protections (LLPs) requirements.

1.2 Scope of Services

The Phase I ESA was conducted in general conformance with the ASTM Designation: E *1527-05*, *Standard Practice for Environmental Site Assessments Process*.

The scope of work for this Phase I ESA was structured to offer a phased, systematic approach to evaluating site conditions. It included inquiry by and/or under the direct supervision of an Environmental Professional (as defined in ASTM Standard Practice *E1527-05*) and it included the following tasks consistent with the AAI Rule, the revised ASTM Standard, and Illinois Phase I requirements:

A review of reasonably ascertainable and practically reviewable standard and supplemental record sources associated with the Subject Property and adjoining properties including, but not limited to: historical resources (e.g. aerial photographs, topographic maps, fire insurance maps, geographical and geological maps, and city directories,). environmental databases (i.e. lists of known sites of contamination and regulated facilities), governmental records (e.g. Federal and State files, building department records, and local fire department records) and prior environmental and geotechnical reports (if provided):

- An inspection of the Subject Property and any improvements as well as visual observations of adjacent properties, and other sites and/or facilities in the vicinity of the Subject Property.
- Formal interviews with present and past (if any) owners, operators, and occupants of the Subject Property (as identified by the Client and/or record sources) and local government officials: and
- Evaluation of the information gathered and preparation of a written report that includes all supporting documentation and details all findings, conclusions, opinions, and any recommendations.

Additionally, as is deemed pertinent, the scope of work was expanded to include potential environmental concerns, such as the existence of asbestos-containing materials that are not required pursuant to the ASTM standards.

1.3 Significant Assumptions

No significant assumptions were made during the course of this Phase I ESA.

1.4 Limitations and Exceptions

K-Plus Environmental performed the Phase I ESA using the degree of care and skill ordinarily exercised under similar circumstances by reputable environmental consultants practicing in this or other localities. No other warranty is expressed or implied. Information presented in the Phase I ESA is deemed reliable: however, there cannot be a guarantee that all potential environmental conditions have been located or identified. The conditions observed and evaluated during the site inspection are representative of the date(s) stated. Materials and conditions that are concealed or are inaccessible may not be discovered.

The lack of visible evidence of potential USTs and/or the fact that individual and agencies identified in this report may not be aware of, or do not have records of the current presence of USTs does not preclude the possibility that USTs could be present at the Subject Property. Visible evidence of USTs, such as fill ports or vent pipes may have been obscured from view, and USTs could have been used at the Subject Property without the knowledge of the current owner/operator, site contact, or government agencies.

The findings, conclusions, and opinions expressed herein are based on reasonably ascertainable and practically reviewable information disclosed through interviews and publicly available records at the time of the Phase I ESA. The statements contained herein, on which our observations, opinions, and conclusions were based, are deemed factual. The reported analyses, opinions, observations, and conclusions are unbiased, professional, and limited only by the reported assumptions, qualifications, and conditions stated herein. All information in this report is from sources deemed to be reliable; however, no representation or warranty is made as to the accuracy thereof. K-Plus cannot be responsible for the quality and content of information obtained from the external sources consulted or for conditions that are concealed, not fully disclosed, or not available at the time of the Phase I ESA.

1.5 Special Terms and Conditions

The Phase I ESA was completed in accordance with terms and conditions as designed by the Client.

1.6 User Reliance

This assessment has been performed in conformance with all applicable legal requirements and accepted practices prevailing in the environmental assessment and asbestos consulting industries, including the U.S. Environmental Protection Agency's final "All Appropriate Inquiry" Rule (70 Fed. Reg. 66070) ("AAI Rule"), the 2005 update of the American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessments (E 1527-05) and the requirements of 415 ILCS 22.2(j)(6)(E), the "Illinois Phase I". The standard of care employed during this investigation should be sufficient to meet the definition of an "innocent landowner" under current environmental laws. If this Phase I ESA report is more than 180 days old, certain sections must be updated in order to maintain qualification for LLPs afforded under CERCLA.

The K-Plus Environmental professional who prepared this assessment meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property.

K-Plus Environmental, its officers, and its employees have no present or contemplated interest in the property or the parties involved. Our employment and compensation for preparing this report are not contingent upon any action or event resulting from the analyses, opinions, observations, or conclusions, in or from the use of this report.

This report is confidential and has been prepared specifically for the use by our Client. No third party may use the information in this report without obtaining the permission of both K-Plus and the clients, for whom this report was prepared. In no event may this report be used in whole or in part in any public offering or security without the prior written consent of K-Plus. No abridgment, abstracting, or excerpting of this report may be made for any purpose whatsoever without obtaining the permission of K-Plus.

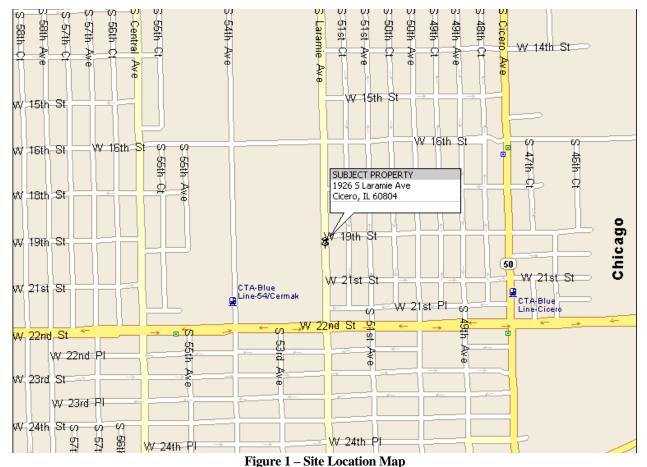

More information regarding the methods used by K-Plus Environmental in creating this Environmental Assessment can be found in Appendix 1- Phase I Environmental Site Assessment Contents.

2.0 SUBJECT PROPERTY

The site reconnaissance was conducted on Monday, June 29, 2009 by Ms. Jessica Madsen, Environmental Professional for K-Plus. Ms. Madsen was accompanied by a representative for the building, during the site inspection. The weather conditions at the time of the visit were sunny and windy with an approximate temperature of 70° F. As a tool in preparing this report and documenting the conditions encountered at the property, various photographs of the Subject Property, surrounding land use, and other relevant features were taken. Copies of all other supporting documents that were relied upon during this project have been included as appendices in this report.

2.1 Site Location

The Subject Property is located north of the intersection between W. 22nd Street and on the west side of South Laramie Avenue. Specifically, the property is located at 1926 South Laramie Avenue in Cicero, Cook County, Illinois (Figure 1).

2.2 Pin & Legal Description

The Subject Property is assigned PIN number 16-21-309-026-0000. No legal description was provided for this Subject Property.

2.3 Site Features

The Subject Property measures approximately 36,000 square feet (ft²) and is currently developed

noted used throughout the office areas.

The production area of the building was noted as largely unfinished, with exposed concrete floors, occasional 12-inch vinyl tiles were noted, unfinished walls, and a steel truss ceiling.

The Subject Property uses natural gas supplied by NICOR for the Subject Property's heating system. Commonwealth Edison provides electricity to the building. According to the site contact, the building is connected to the Town of Cicero water and sewer systems. Waste Management removes recyclable wastes from the Subject Property. with a partial two-story industrial building that measures approximately 24,000 ft². The building on the Subject Property was noted as constructed of brick masonry on a concrete slab foundation with a partial basement. An asphalt paved parking lot surrounds the building at the Subject Property.

The front two story partial portion; the front office area was noted as finished with the following: floors were finished with carpeting; the interior walls were painted drywall; the ceilings were finished with 2' x 4' suspended ceiling tiles; and fluorescent lighting was

2.4 Surrounding Area

The Subject Property is located in a industrial area. Specifically, the Subject Property is bounded on the north by an undeveloped lot, used for a towing yard; on the south by an industrial property; on the east by Laramie Avenue, followed by similar industrial buildings; and on the west by part of an industrial property, followed by an undeveloped lot (Figure 2).

Figure 2 – Site and Surrounding Area (aerial from October, 2007)

2.5 Topography

In general, the topography of the Subject Property is relatively flat, with no discernible elevation changes. According to the United States Geological Survey 7.5 Minute Series Topographic Map of Berwyn, Illinois Quadrangle (1998), the Subject Property lies at a relative surface elevation of approximately 598 feet above mean sea level. The nearest surface water body is South Branch of the Chicago River which is located within $2\frac{1}{2}$ of a mile south of the Subject Property. Regional groundwater flow in the area, however, is expected to flow in a southerly direction (Figure 3).

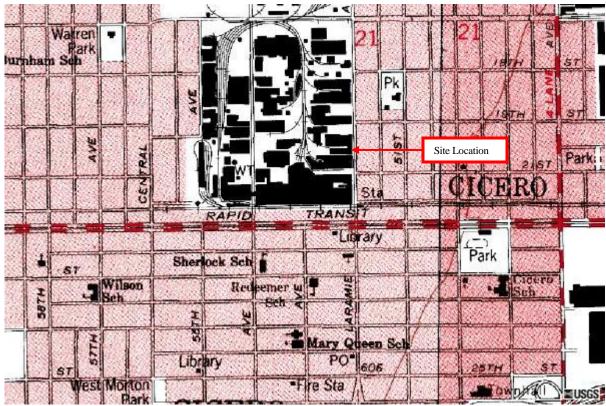

Figure 3 – Topographic Map (USGS, 1998)

2.6 Area Geology

In order to categorize and assess the geologic conditions encountered at the Subject Property, K-Plus consulted various sources of information including geological maps constructed by the Illinois State Geological Survey. Specific geologic maps used during this investigation include *Potential for Contamination of Shallow Aquifers by Land Burial of Municipal Wastes*; and *Potential for Contamination of Shallow Aquifers by Surface and Near-Surface Waste Disposal* by Berg, Richard C. et al (Berg Map) which were constructed to describe and map geologic materials to a depth of 50 feet throughout the state. In these maps, various geologic materials were differentiated by thickness, texture, permeability, and stratigraphic position in order to rate their relative contamination potential for aquifers in any area of the state.

According to the Berg Map, the regional geologic materials in the area are designated as type as an "E"-type soil (Figure 4). An "E" classification is described as uniform, relatively impermeable silty and clayey diamictons greater than 50 feet in thickness, with no evidence of interbedded sand and gravel.

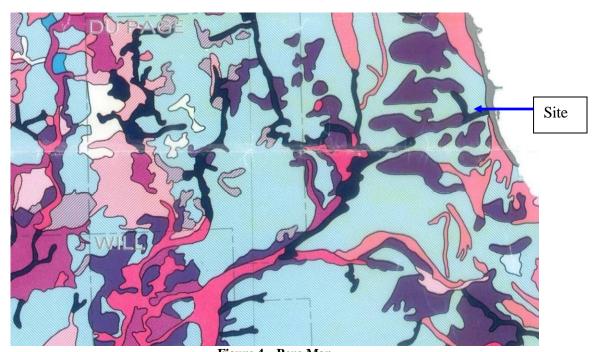

Figure 4 – Berg Map

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

3.0 PRIOR REPORT

No report documents were available for the Subject Property.

4.0 OBSERVATIONS AND FINDINGS

The findings presented herein are based on all appropriate inquiry into current practices and previous ownership, uses and operations regarding the Subject Property consistent with good commercial and prudent engineering practices. The information obtained through the research and the site inspection is presented in the following sections. As appropriate, photographs and figures have been included for reference.

4.1 Prior Use History

Historical information gathered during this investigation indicates that the Subject Property was first developed for industrial purposes since at least 1950.

K-Plus reviewed aerial photographs obtained through Environmental Data Resources, Inc. (EDR), and Google Earth. Aerial photos were found from the years 1951, 1963, 1972, 1983, 1988, 1994, 2005, and 2007. The 1951 aerial map depicts the Subject Property and the surrounding area as developed with industrial buildings. The subsequent aerial maps from 1963, 1972, 1983, 1988 and 1994 show the Subject Property and the development of the surrounding area with little changes to development. The 2005 and 2007 map illustrates the Subject Property as developed with the current building, however buildings to the north of the Subject Property have been demolished.

K-Plus conducted a search of Sanborn Fire Insurance Maps through EDR. Sanborn for the Subject Property were reviewed for the following years; 1918, 1950, 1975, 1988, 1991, 1993, 2002 and 2004. According to the Sanborn map from 1918, the Subject Property was an undeveloped lot at that time. According to the Sanborn map from 1950, the Subject Property has been developed with the current building. At that time the building was considered part of the lot to the north and occupied by "Ceco Steel Products Corp." the building is labeled as "cutting & steel storage". No changes to the Subject Property are noted on the 1975, 1988, 1991, 1993, 2002 or 2004 Sanborn maps.

K-Plus also reviewed a topographic map for the year 1998, which depicts the Subject Property and the surrounding area as developed.

K-Plus submitted a Freedom of Information Act (FOIA) request to the Town of Cicero concerning any historical information regarding the Subject Property. No additional information was provided by the building department.

According to the Cook County Assessor's office, the building on the Subject Property was developed since approximately 1951.

Due to the longtime use of the Subject Property for industrial purposes, the site history is identified as an REC.

4.2 Facility Operations

In order to identify existing RECs associated with the Subject Property, K-Plus conducted a thorough on-site inspection. During the site inspection, K-Plus noted that the Subject Property,

which appeared to be in fair condition, is primarily used as office and storage space for Defender Door Company; K-Plus also observed at least two paint booths and a production floor at the Subject Property.

During the inspection of the Subject Property K-Plus noted the use and storage of hazardous materials on the production floor of the Subject Property. Specifically, K-Plus noted at least two paint booths and the associated containers storing paints and thinning liquids. K-Plus also noted a flammable storage locker and the storage of pails of paints and other

flammable liquids. According to the site contact, currently the property uses water based paints for their products, however in the past it is likely that they would have used solvent based paints. K-Plus also noted acetylene containers, and other similar products at work stations located on the production floor.

According to the environmental database, the Subject Property is identified on the RCRA Small Quantities Generators databases. According to the database, Mid-American Door Distributors operated on this property as a Large Quantities Generator in 1992 and a Small Quantities Generator in 2006.

The use and storage of hazardous materials on the Subject Property is identified as an REC.

4.3 Storage Tank Search

Efforts were made to determine the presence of any tanks used to store regulated substances at the Subject Property or at neighboring properties. Visual observations from the inspection were supported by checking state and local resources for information regarding tanks. During the investigation of the Subject Property, K-Plus did not identify any ASTs or USTs at the Subject Property.

K-Plus submitted a FOIA request to the Town of Cicero concerning any historical information regarding storage tanks and hazardous material usage at the Subject Property. Additionally, K-Plus reviewed the Office of the Illinois State Fire Marshal (OSFM) database of registered USTs and the Illinois Environmental Protection Agency (IEPA) database of leaking UST (LUST) sites. No records of underground storage tanks were found.

4.4 PCB Equipment Identification

The K-Plus Environmental inspector attempted to locate and identify all transformers or capacitors and, if present, to determine the age and owner of this equipment as well as its condition. During the inspection, K-Plus observed a three-pole-mounted transformer was noted as located just south of the

building on the Subject Property, in the alley between the Subject Property and 1942 S. Laramie. During the inspection of the transformer, the inspector noted that it appeared to be in good operating condition with no signs of leaking or staining evident on the pole or ground surrounding the unit. Finally, the unit was not marked with any black and yellow PCB warning stickers. A warning sticker is required by federal regulations for equipment containing between 50 and 500ppm PCBs or greater. ComEd, as the owner of the transformers, is responsible for keeping the equipment in compliance with

federal, state, and local regulations and the cleanup of contamination resulting from leaking equipment, as necessary.

4.5 Environmental Database Evaluation Area

During this evaluation, K-Plus utilized Environmental Data Resources to conduct a standard environmental record search in accordance with the ASTM standards. The specific databases consulted, the publication dates, and the search results are included in a database report included as Appendix 5.

The EDR database report identified the following sites within the standard ASTM search radius: one (1) Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) listing; four (4) Comprehensive Environmental Response, Compensation and Liability Information System-No Further Remediation Action Planned (CERC-NFRAP) listing; eight (8) Corrective Action Activity (CORRACTS) listings; three (3) Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG) listings; two (2) Resource Conservation and Recovery Act- Conditionally Exempt Small Quantity Generator (RCRA-CESQG) listings; two (2) State Hazardous Waste Sites (SHWS) listings; two (2) Category Listing (CAT) listings; one (1) SWF/LF listing; twenty-six (26) LUST listings; nine (9) UST listings; two (2) Engineering Controls (ENG CONTROLS) listings; three (3) Institutional Controls (INST CONTROLS) listings; and eleven (11) Site Remediation Program (SRP) sites.

The EDR database also identified three sites that were orphaned sites. A reasonable attempt was made by K-Plus to locate the orphaned sites to ensure that they were not an adjoining or nearby property. The results indicated that these orphaned sites are not in close proximity to the Subject Property and are therefore not a concern.

4.5.1 Subject Property

The Subject Property is listed as RCRA Small Quantities Generator site, under the name Mid America Door.

4.5.2 Adjacent Properties

As part of this Phase I ESA, K-Plus conducted a limited drive-by investigation of the adjacent and nearby properties. A review of the environmental databases indicates that some of the adjoining neighboring properties appear on the environmental databases.

Bongi Cartage, Inc. (1920 S. Laramie) to the adjoining north of the Subject Property was identified on the UST databases. According to the database the site reported having up to 5 underground storage tanks. According to records from the OSFM all four tanks have been removed from the Subject Property.

Innerpac, Inc. (1942 S. Laramie) to the adjoining south/southwest of the Subject Property is identified on the UST database. According to the information from the OSFM this site is registered with one 5,000-gallon heating oil underground storage tank. No further information regarding the tanks status was available.

4.5.3 Surrounding Area Properties

Although some of the surrounding area properties are listed on the environmental databases, based on information obtained during this evaluation, the thick gray clay geology (which inhibits the migration of contaminants) in the area, and the likely direction of groundwater flow, it does not appear that any of the surrounding area properties would have impacted the Subject Property any more than other surrounding area properties.

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

5.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of 1926 S. Laramie Avenue. Any exceptions to, or deletions from, the practice are described in Section 6.0 of this report. This assessment has identified the following RECs:

- The use and storage of hazardous substances was noted at the Subject Property.
- The Subject Property has been utilized for industrial purposes since its development.

Further investigation of the Subject Property would be necessary in order to determine what, if any impact the current and historic industrial operations have had on the subsurface of the Subject Property.

6.0 DEVIATIONS

K-Plus has performed this Phase I ESA in conformance with the scope and limitations of ASTM Standard E 1527-05. This Report was prepared with the following limitations and exceptions:

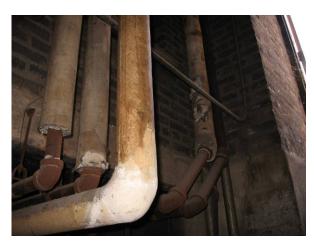

- 1. No legal description was provided for this property. This data gap does not affect the ability of K-Plus to identify RECs at the property.
- 2. While the historical use of the property was identified in every decade from 1918 to present time, the historical use was not always identified in 5 year intervals as required by the ASTM standard. Historical record reviewed indicates that the Subject Property use and development is as described herein. This data gap does not affect the ability of K-Plus to identify RECs at the property.
- 3. A Freedom of Information Act request was made to the Building Department. No building records were received for this property from the Town of Cicero. This data gap does not affect the ability of K-Plus to identify RECs at the property.
- 4. K-Plus herby affirms that the regulatory database search for this Phase I ESA is subject to the limitations of Environmental Data Resources Inc. (EDR).
- 5. K-Plus was not provided with an environmental lien records search. However, a review of all standard environmental database searches did not reveal any evidence of environmental issues or liens for the Subject Property. In addition, site contacts were unaware of any environmental liens against the Subject Property.
- 6. No 50 year Chain-of-Title was provided by the client for evaluation. This data gap does not affect the ability of K-Plus to identify RECs at the property.
- 7. K-Plus did not conduct interviews of past owners, operators or occupants. K-Plus was able to interview a representative for the current occupant. This data gap does not affect the ability of K-Plus to identify RECs at the property.
- 8. Access to the rooftop was not provided. Therefore, K-Plus makes no guarantees as to equipment, which may be present on the roof. However, K-Plus Environmental did not observe rooftop equipment of environmental significance as viewed from the ground.

7.0 ADDITIONAL SERVICES

Per the request of the client, K-Plus Environmental evaluated the following non-scope considerations.

7.1 Asbestos

As part of a standard Phase I Assessment and in accordance with the Guidance for Controlling

Asbestos-Containing Materials in Buildings, issued by the U.S. Environmental Protection Agency (USEPA) in 1985, K-Plus Environmental concentrated on identifying suspect materials sprayed or troweled on ceilings and walls; insulation on pipes, boilers, and other mechanical equipment; and miscellaneous materials such as ceiling and floor tiles. Inaccessible areas (those locations where inspection access is not permitted or requires a considerable amount of mechanical or structural disassembly) were not evaluated during this Phase I ESA. Inaccessible areas include, but are not limited to, pipe chases behind

solid walls and ceilings, the interiors of machinery and equipment, and the interior of the building's water sewer system, which may contain transite piping.

Based on the age of the building (1950), it is possible that asbestos containing materials (ACMs) are present in original building materials. During the site inspection, the interior of the main building offices appeared to be new and not original to the building. Interior building materials noted were

air duct insulation, 12-inch vinyl floor tiles, drywall joint compound, 2' x 4' ceiling tiles, carpeting mastic, and baseboard mastic were all identified as suspect for asbestos. In the basement of the building on the Subject Property, K-Plus noted thermal pipe insulation on piping leading to and from the hot water heater in the basement.

Therefore, K-Plus recommends an asbestos survey be conducted to evaluate the presence and condition of any ACMs at the Subject Property.

7.2 Lead Paint

K-Plus performed a limited lead-based paint search of accessible areas in the interior of the buildings. In order to determine the presence of lead-based paint on the Subject Property, K-Plus inspected all reasonably accessible painted surfaces (i.e. walls, ceilings, door frames, window sills, etc.) for potential lead-based paint.

Based on the age of the building, it is possible that lead-based paint is present in the lower painted layers of the Subject Property. Since the Subject Property is not utilized for residential purposes, the existence of lead-based paint is not considered a significant concern for the Subject Property.

7.3 Radon

According to the USEPA Map of Radon Zones in Illinois (1993), Cook County, the county in which the Subject Property lies, has been designated as Zone 2, which is deemed as having a moderate potential for radon. According to the Map, Zone 2 has a predicted average screening level of 2 to 4 pCi/L. As a comparison, the USEPA recommends that the radon level be under a concentration of 4 pCi/L.

As the Subject Property is not currently being used for residential purposes, it is the opinion of K-Plus that radon is not currently an issue, and therefore no on-site radon testing was conducted.

7.4 *Mold*

K-Plus did not observe any obvious evidence of mold at the Subject Property, nor was there any visible evidence of significant water leaks or water damage that may lead to conditions in which mold thrives.

7.5 Other Non-Scope Considerations

During this evaluation, K-Plus noted that there are no high voltage power lines near the Subject Property. K-Plus also found that the Subject Property has not been identified as a culturally or historically protected land.

8.0 REFERENCES

- 1. <u>Site Contact:</u> K-Plus was accompanied by a representative for the property owner, during the site inspection.
- 2. <u>Aerial Photographs</u>: An aerial photograph search was provided by Environmental Data Resources (EDR). Aerial photographs dated 1951, 1963, 1972, 1983, 1988, 1994, and 2005 were reviewed in conjunction with this investigation.
- 3. <u>Sanborn Fire Insurance Maps</u>: A Sanborn map search was conducted through Environmental Data Resources (EDR). Sanborn maps for the years; 1918, 1950, 1975, 1988, 1991, 1993, 2002 and 2004 were available for the Subject Property and surrounding area.
- 4. <u>Topographic Maps</u>: A topographic map from the USGS 7.5 Minute Series, Berwyn, Illinois Quadrangle was reviewed for the year 1998 and is found as Figure 3.
- 5. <u>Building Department Records</u>: K-Plus requested building records from the Town of Cicero. Additionally, K-Plus spoke with representatives of the Building Department for Cook County regarding the Subject Property.
- 6. <u>Storage Tank Search:</u> K-Plus requested records regarding the presence of storage tanks from the Town of Cicero Fire Department. Additionally, K-Plus reviewed the Office of the Illinois State Fire Marshal (OSFM) database of registered USTs and the Illinois Environmental Protection Agency (IEPA) database of leaking UST (LUST) sites.
- 7. <u>Township Assessor Office</u>: K-Plus consulted with the Cook County Assessor's office to obtain current information regarding the building on the Subject Property.
- 8. Prior Reports: No prior reports were made available for K-Plus to review.
- 9. <u>Environmental Database Report</u>: K-Plus reviewed an environmental database radius map search report prepared by Environmental Data Resources (EDR) for the Subject Property and surrounding area.

9.0 CERTIFICATION

The Phase I ESA was completed by Ms. Jessica Madsen, Environmental Professional, and was reviewed by Mr. Daniel M. Caplice, P.E.. Professional profiles are provided in Appendix 6.

I declare that to the best of our professional knowledge and belief, I/we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I/We have the specific qualifications based on education, training, and experience to assess the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Conformance with 40 CFR Part 312 was achieved through completion of the assessment in accordance with ASTM Standard Practice E 1527-05.

APPENDIX 1

PHASE I ENVIRONMENTAL SITE ASSESSMENT CONTENTS

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

Area Geology

The potential for contaminating groundwater resources is a critical concern. Contamination may result from land burial of municipal wastes and surface or near-surface disposal of wastes (i.e. septic systems; surficial sludge; agricultural pesticides, herbicides and fertilizers; accidental spills of hazardous chemicals or petroleum products; etc.). When chemical or biological agents from wastes enter surface water or groundwater, they present potential health hazards. Groundwater aquifers are susceptible to contamination because their hydrogeologic properties provide a rapid transport pathway for migrating compounds. The degree of potential impact is determined by a combination of the geological and hydrological conditions in a given area.

Property Inspection

A visual inspection of the Subject Property was performed. The inspection consisted of a walk-through of the building and the surrounding grounds. During the walk-through of the building, an effort was made to look at all mechanical and common areas. During the inspection of the surrounding grounds, the inspector looked for stained or disturbed soil, signs of illegal or unauthorized dumping, and any improper or imprudent use, storage, and disposal of hazardous materials.

Storage Tank Search

The storage tank search is completed because studies have estimated that a quarter of the country's underground storage tanks (USTs) are leaking. While most leaks are small and don't present major environmental threats, larger leaks that result in groundwater contamination can require significant cleanup actions because several million of these USTs, as well as a large percentage of above ground storage tanks (ASTs) in the United States, contain petroleum or hazardous chemicals.

PCB Equipment Identification

Due to their physical and chemical properties, PCBs were widely used as a dielectric fluid in electrical transformers and capacitors. In addition to electrical equipment, PCBs were also widely used in hydraulic fluids and some lubricating oils. Although the primary concern with PCB contamination is from large electrical and mechanical equipment in heavily industrialized areas, small quantities of PCBs may also be present in any older equipment utilizing dielectric fluid or hydraulic oils.

In 1976, Congress enacted TSCA (Toxic Substance Control Act), which specifically regulates PCBs. In a 1986 USEPA report, it was estimated that, out of all the transformers currently in operation across the country, approximately 77,000 contain PCBs. Of these 77,000 transformers, about 18,000 are owned by utility companies with the remainder belonging to building owners.

Environmental Database Evaluation Area

K-Plus conducted a limited visual inspection of all adjoining properties in order to identify any RECs or other potential environmental issues that may pose a threat to the Subject Property. In addition, and as required by the ASTM Standard, regulatory databases, and when available, regulatory files, were reviewed during this assessment to determine whether the Subject Property

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

has been the subject of any environmental regulatory agency or order. Because the migration of chemicals is not limited to property lines, neighboring properties can in some cases impact the Property. For this reason, nearby properties were also evaluated to determine if any of these have had a history of environmental problems.

All sites located within the ASTM standard radius distances from the Subject Property are evaluated as part of the ESA. Any sites that are considered to be a potential environmental concern based on their operations, regulatory history, or proximity to the Subject Property are investigated more extensively. If a detailed discussion of a property listed in one of the environmental databases is not provided here, it is because K-Plus has determined, based on research and observations, that the property does not pose a significant environmental risk to the property being addressed in the Phase I Environmental Assessment.

Asbestos

Asbestos-Containing Material (ACM) gained widespread use because of its availability and unique properties as reinforcement material and an insulator. As a result, asbestos was commonly used in many building materials such as vinyl floor tile and mastic, ceiling tile, thermal insulation, and wall board. Eventually, however, medical research determined that prolonged exposure to asbestos was a potential cause of cancer and other lung diseases. Asbestos products manufacturing in the U.S. was banned under the Toxic Substances Control Act (TSCA) beginning in 1990.

Lead Paint

According to the National Lead Information Center, any residential structure built before 1978 may contain lead-based paint. Further, most residential buildings constructed prior to 1960 contain lead-based paint; and these older structures generally contain paint that contains higher concentrations of lead than paints manufactured in later years.

Lead is a heavy, gray metal that was historically added to house paints and other paints because it helped them dry faster. Lead-based paint was also preferred because it made a coating that stood up to wear and tear and weathering. Today lead is classified as a toxic substance and is known to cause adverse health effects in humans and the environment. In 1978 lead-based paint for residential use was banned by the Consumer Products Safety Commission. In the residential housing sector, the U.S. Department of Housing and Urban Development (HUD) estimates that there are about 57 million privately owned and occupied residential dwellings built before 1980 that contain lead-based paint. If in good condition and when left intact, lead-based paint by itself is not likely to present a hazard. However, deteriorating paint, particularly in residential situations, may pose a significant public health risk.

Radon

According to the United States Environmental Protection Agency Office of Radiation and Indoor Air, nearly 1 out of every 15 homes in the U.S. is estimated to have elevated radon levels. Radon is

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

a gas that results from the natural breakdown (radioactive decay) of uranium, and can be found in soils and rocks containing uranium, granite, shale, phosphate, and pitchblende. In addition, radon can be present in certain types of industrial wastes including byproducts from uranium or phosphate mining. In outdoor conditions, radon is diluted to very minor concentrations; however, inside of an enclosed space such as a basement, radon can accumulate causing adverse health affects including an increased risk of developing lung cancer.

In order to evaluate the risk of radon at a property, K-Plus first reviewed all applicable Federal and State radon studies. Specifically, for properties in Illinois, K-Plus reviewed a statewide radon screening conducted in 1990 by the Illinois Department of Nuclear Safety. K-Plus then considered the property use (i.e. residential, commercial, industrial, etc.) and the presence of any useable enclosed spaces (i.e. residential basements) to further determine the extent of risk. In instances where a property was considered a potential risk for radon, K-Plus conducted an on-site radon screening test.

Mold

K-Plus performed a limited mold search of accessible areas in the interior of any buildings. Often mold can negatively affect the health of the environment or humans and can go undetected in between wall spaces or dropped ceilings.

Vapor Intrusion

Vapor Intrusion is the migration of volatile chemicals from the subsurface into overlying buildings. Volatile chemicals in buried wastes and/or contaminated groundwater can emit vapors that may migrate through subsurface soils and into indoor air spaces of overlying buildings in ways similar to that of radon gas seeping into homes. Through any breaks in the foundation, such as for sump pumps, drains, or cracks, soil vapors can enter properties. Soil vapors accumulate over time in your building and can lead to indoor air pollution, which can have an affect on your health or the health of your employees.

The purpose of a vapor intrusion assessment is to identify, to the extent feasible, the potential for vapor intrusion conditions (pVIC) or vapor intrusion conditions (VIC). For this Phase I ESA, only the first tier of the evaluation process will be used to determine whether a pVIC exits.

Other Non-Scope Considerations

Other non-scope considerations such as the presence of high voltage power lines, wetlands, or culturally or historically significant lands may affect property value or the health of the environment or its inhabitants.

1926 South Laramie Avenue Cicero, Illinois 60804 Cook County

APPENDIX 2 GLOSSARY OF TERMS

ACM – Asbestos Containing Material

ACBM – Asbestos Containing Building Material

Adjoining or adjacent property – any real property or properties the border of which is contiguous or partially contiguous with that of the *Subject Property*, or that would be contiguous or partially contiguous with that of the *Subject Property* but for a street, road or other public thoroughfare separating them.

All appropriate inquiry (AAI) – that inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice.

ASTM – American Society of Testing Materials or ASTM International

AST – Aboveground Storage Tank

Business environmental risk – a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a Subject Property, not necessarily limited to those environmental issues required to be investigated by ASTM. Business environmental risks may involve addressing one or more non-scope considerations.

Contaminant source – the origin of the soil and groundwater contamination; may be a general property location (for example, a dry cleaner property address) or, if known, a specific location on a property (for example, the dumpster behind the dry cleaners where filters with perchloroethylene dry cleaning solvent were disposed).

Data gap – a lack of or inability to obtain information required by this practice despite good faith efforts by the *environmental professional* to gather such information. Data gaps may result from incompleteness in any of the activities required by ASTM, including but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory official, etc.).

EDR – Environmental Data Resources Inc., the supplier of the environmental radius map report.

Environmental professional – a person meeting the education, training, and experience requirements as set forth in ASTM Practice E 1527.

Fire insurance maps – or Sanborn maps are maps produced for private fire insurance map companies that indicate uses of properties at specific dates and that encompass the property. These maps are often available at local libraries, historical societies, private resellers or from the map companies who produced them.

FOIA – Freedom of Information Act request

GLOSSARY OF TERMS

Groundwater – the water contained in the pore spaces of saturated geologic media.

Hazardous materials/ substances – a substance defined by CERCLA.

Hazardous waste – a solid waste or combination of solid wastes, which because of its quantity, concentration or physical, chemical or infections characteristics may (A) cause or significantly contribute to an increase in mortality or and increase in serious irreversible or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed.

IEPA – Illinois Environmental Protection Agency

LUST – Leaking Underground Storage Tank

Non Scope factors -- ... Environmental issues or conditions at a property that parties may wish to assess in connection with commercial real estate that are outside the scope of this [ASTM] practice.

Orphaned site – EDR uses the term "orphaned site" to reference a site that, due to incomplete geographic location data, are not plotted on the EDR radius maps.

PCB – Polychlorinated Biphenyl, environmental contaminant commonly found in power transformers.

Petroleum products – petroleum, including crude oil distillates of crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance; natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). Including but not limited to gasoline, kerosene, diesel oil, jet fuels, and fuel oil.

Phase I Environmental Site Assessment (ESA) – the process by which a person or entity seeks to determine if a particular parcel of real property is subject to *recognized environmental conditions* or as defined by ATSM 1527-05.

Pits, *ponds* or *lagoons* – man-made or natural depressions in a ground surface that are likely to hold liquids or sludge containing *hazardous substances* or *petroleum products*. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the *pit*, *pond* or *lagoon*, including, but not limited to discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Publicly available – information that the source of the information allows access to the information by anyone upon request.

GLOSSARY OF TERMS

Potable water – water that is or can be used for consumption

Practically reviewable – information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis or irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the property or a geographic area in which the property is located are not generally *practically reviewable*.

Preferential pathway – the pathway that has the least amount of constraint on the migration of chemicals of concern.

REC -- As defined in ASTM E 1527-05, the term Recognized Environmental Condition means "...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property." In addition, the term Historical Recognized Environmental Condition means ". . . an environmental condition which in the past would have been an REC, but which may or may not be considered a REC currently." Performance of the Phase I ESA was intended to reduce, but not eliminate, uncertainty regarding the existence of Recognized Environmental Conditions in connection with the Subject Property.

Subject Property – The building or parcel on which the Phase I Environmental Site Assessment is the focus.

USEPA – United States Environmental Protection Agency

Underground Storage Tank (UST) – any tank, including underground piping connected to the tank, that is or has been used to contain *hazardous substances* or *petroleum products* and the volume of which is 10% or more beneath the surface of the ground.

Volatile organic compound (VOC) – a general term for an organic compound that has a high enough vapor pressure at standard temperatures and pressure to significantly vaporize and enter the atmosphere.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/09/2009 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
STERLING MORTON HIGH SCHOOL	1600-1874 S. 54TH AVE.	NW 1/4 - 1/2 (0.371 mi.)	M49	70

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard

associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
BARON-BLAKESLEE INC	1634 SOUTH LARAMIE AVEI	N N 1/4 - 1/2 (0.259 mi.)	28	35

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Illinois Environmental Protection Agency's Category List.

A review of the SHWS list, as provided by EDR, and dated 03/05/2009 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Illinois Environmental Protection Agency's Available Disposal for Solid Waste in Illinois--Solid Waste Landfills Subject to State Surcharge list.

A review of the SWF/LF list, as provided by EDR, and dated 12/01/2007 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there is 1 EDR Historical Auto Stations site within approximately 0.25 miles of the target property.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

> ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Evaluation Action Summary:

Evaluation date: 06/30/1994

Evaluation: FOCUSED COMPLIANCE INSPECTION

Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

Evaluation date: 07/07/1986

Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE

Area of violation: Generators - General

Date achieved compliance: 02/03/1987 Evaluation lead agency: State

Evaluation date: 04/21/1986

Evaluation: NON-FINANCIAL RECORD REVIEW

Area of violation: Generators - General

Date achieved compliance: 11/06/1987 Evaluation lead agency: State

Evaluation date: 06/20/1985

Evaluation: FINANCIAL RECORD REVIEW

Area of violation: Generators - General

Date achieved compliance: 04/20/1987 Evaluation lead agency: State

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: School District 201 constructed a high school on a former industrial park area

and encountered unexpected quantities of soil contamination (heavy metals, Polyaromatic Hydrocarbons and TCE). The school district requested USEPA

resistance in removal of contaminated soil due to lack of funding.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2007

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 205104.2

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

Direction Distance Elevation

n Site Database(s) EPA ID Number

GENERAL ELECTRIC CO (Continued)

1000213448

EDR ID Number

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code:

D001

Waste name:

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:

D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F006

Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT

FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF

ALUMINUM.

Waste code: F008

Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM

ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F009

Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING

OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

> NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Facility name: AMD INDUSTRIES INC Classification: Small Quantity Generator

Date form received by agency: 11/13/1980

Facility name: AMD INDUSTRIES INC Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

FINDS:

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110001289800

> TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Corrective Action Summary:

Event date: 03/31/1994

Event: CA Prioritization, Facility or area was assigned a low corrective

action priority.

Violation Status: No violations found

WESTERN ELECTRIC CO INC Facility name: Classification: Not a generator, verified

Hazardous Waste Summary:

Waste code: D000 Waste name: Not Defined

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name:

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

> NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D008 **LEAD** Waste name:

Waste code: D009 **MERCURY** Waste name:

Waste code: F001

THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: Waste name:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS: ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF

Actual: Registry ID: 110000434744 **606 ft.**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UIC: Underground Injection Wells

Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

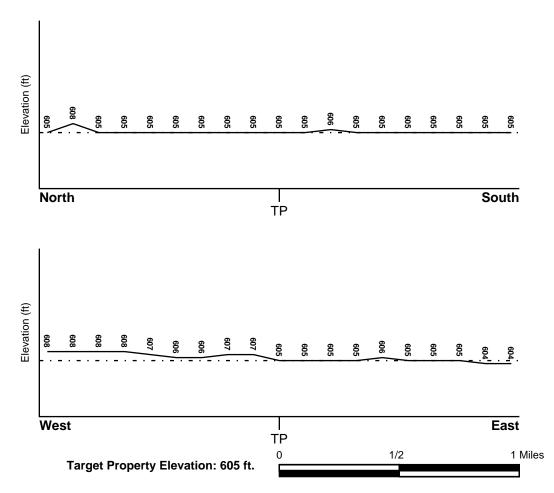

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

^{*@1996} Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

	LOCATION	GENERAL DIRECTION
MAP ID	FROM TP	GROUNDWATER FLOW
19	1/2 - 1 Mile SSE	Not Reported
24	1/2 - 1 Mile NNW	ESE
26	1/2 - 1 Mile NNE	SE

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Paleozoic Category: Stratifed Sequence

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBANLAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
	Bou	ndary		Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)

Floor	# Sites	Min pCi/L	Avg pCi/L	Max pCi/L	# Sites>4pCi/L	# Sites>20	County
Basement	212	0.6	2.9	11.6	40	0	COOK
1st Floor living area	43	0.5	2.3	5.8	4	0	COOK
1st Floor bedroom	6	1	2.1	3	0	0	COOK
Total	261	0.5	2.8	11.6	44	0	COOK

Federal EPA Radon Zone for COOK County: 2

Note: Zone 1 indoor average level > 4 pCi/L.

: Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.

: Zone 3 indoor average level < 2 pCi/L.

Federal Area Radon Information for COOK COUNTY, IL

Number of sites tested: 82

Area	Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area - 1st Floor	1.273 pCi/L	96%	4%	0%
Living Area - 2nd Floor	0.900 pCi/L	100%	0%	0%
Basement	1.740 pCi/L	93%	7%	0%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after

August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Title: Project Manager

Years Experience: +10 yrs.

Education:

B.S., Environmental Health Sciences Degree, Illinois State University

OSHA 1910.120, 40 hour - HAZMAT training.

OSHA 8-hour refresher

IDPH: AHERA Asbestos Building Inspector:IL

SUMMARY OF EXPERIENCE

Illinois State University established its Environmental Health Sciences Program in 1974. Environmental Health Sciences courses at Illinois State University focus on the history and establishment of environmental laws, as well as the application of the laws in the field. The diversity of Mrs. Madsen's undergraduate degree has enabled her to develop strong analytical and research skills. Mrs. Madsen's ability to handle multiple tasks in team environment has greatly strengthened her time management and communication skills.

As a Project Manager for K-Plus Environmental, Mrs. Madsen has been responsible for conducting hundreds of project oversight and fieldwork activities, as well as environmental assessments and compliance audits on a broad range of properties, from industrial sites to multi-family residential properties, and writing technical reports to ensure compliance and conformance with environmental regulations and guidelines. Mrs. Madsen's effective management and organizational skills have enabled her to work on a variety of projects, including property assessments, subsurface soil and groundwater investigations, asbestos and lead paint surveys, site remediation projects and underground storage tank removals and abandonment. Mrs. Madsen's educational background, strong analytical, technical and communication skills, as well as her project management experience, allow her to efficiently and effectively communicate technical concepts and issues to a wide variety of constituents.

Selected Project Involvement

Spill Response Remediation and Restoration, Rancho Cordova, CA: Project Manager for the environmental remediation of a large tract of land contaminated by a spill of PCB-contaminated oil. Because the contamination was on private property not owned by the responsible party, the cleanup objective for the work was total removal of all contamination. Mrs. Madsen directed all onsite removal and restoration activities that were completed. All work was completed on an expedited schedule over a holiday weekend.

SRP Site Closure, Former Industrial Facility, Seneca, IL: Served as Resident Engineer to manage and direct the final phase of an environmental clean up of a former industrial site adjacent to Illinois River. Work involved the testing and removal of soil contaminated by pesticides, followed by site restoration. K-Plus worked under the supervision of the Illinois EPA during the clean-up effort.

SRP Site Closure, Industrial Facility, Skokie, IL: Leaking tanks identified at an adjacent parcel migrated off-site. An extensive subsurface investigation was completed to determine the horizontal and vertical extents of the soil and ground water contamination. During the investigation, secondary surficial soil contamination was identified on the site due to spillage or dumping from the former adhesives manufacturing operations. The site was closed following fate and transport modeling. The closure was achieved with minimal cost to the owner by utilizing land restrictions and an engineered barrier and without any

active remedial activities. Upon review, the IEPA issued a No Further Remediation (NFR) letter for the property.

Leaking Underground Storage Tank Program, Commercial Facility, Melrose Park, IL: During an environmental assessment of the property, it was determined that the prior use of the property was a gasoline station. Following a magnetometer survey that suggested tanks were still present at the property, Mrs. Madsen directed the removal and destruction of the tanks. During removal activities it was determined that one or more of the tanks had experienced a leak, therefore a LUST Incident number was obtained and all affected soils were removed from the property. The site was cleaned to Illinois residential property standards and the Illinois EPA issued a NFR letter with no restrictions.

Environmental and Erosion Control Manager: Mrs. Madsen worked with Walsh Construction on their North-South Tollway Expansion Project. Mrs. Madsen worked with the Illinois Tollway alongside numerous Agency representatives to organize and protect the sensitive wetland species, as well as, the Hine's Emerald Dragonfly (endangered), identified in the Des Plaines River Valley during the construction of the I-355 Bridge through Lemont, Illinois. The project included the design and implement of a Maintenance Plan, Environmental-Safety Discussion, Dust Control Plan, Pollution Control Plan, as well as, the implement of the Erosion Control Plan, which was prepared and approved by the IEPA, in coordination with the local Agencies.

National Marine. Wetland Monitoring and Ecological Assessment: This project was located on the Illinois River within a flood plain. The site contained forested and wetland areas and a variety of vegetation and wildlife. Mrs. Madsen, Project Scientist, was responsible for performing site characterization and water quality investigations and evaluations. Assisted with the natural resource assessments and monitoring. Performed soil, surface water and groundwater sampling. Completed draft reports for submittal to the USEPA under CERCLA.

Federal Agency Experience: Mrs. Madsen has worked on numerous Phase I Environmental Site Assessments for potential cellular tower sites located throughout the Midwest. As part of these projects Mrs. Madsen was required to complete full NEPA screens on these properties in order to receive a Finding of No Significant Impact (FONSI) letter from the FAA.

National Experience: Mrs. Madsen has traveled to other states in order to conduct Phase II Subsurface Investigations such as: New York, Michigan, Indiana and Texas. With the Subsurface Investigations in foreign states it is necessary to comply with the local state or USEPA regulations, especially when looking at the analysis of lab data. Mrs. Madsen has conducted the research behind the regulations, in order to learn acceptable chemical limits for the soils in each of these states, as well as completed detailed technical reports which meet those state regulations.

SUMMARY OF EXPERIENCE

Mr. Caplice is a licensed professional engineer in 14 states with 26 years of environmental engineering and consulting experience. He has served as a consulting environmental engineer for various private, public, and non-profit institutions and he worked in several different capacities for the United States Environmental Protection Agency. He has an in-depth understanding of local, state and federal regulations and has performed projects in accordance with CERCLA, RCRA, CWA/Oil Pollution Act, CAA, NCP, and TSCA requirements. His specialized areas of expertise are evaluation of contaminated properties, assessment of risk and endangerment, regulatory compliance and permitting, hazardous waste management, industrial processes, Brownfield development, water quality, and site management including investigation, remediation, construction management, and monitoring.

Currently Mr. Caplice is President of the Engineering Division K-Plus, a 18 year-old, full service professional technical service company with offices in Illinois, Indiana, Wisconsin, North Carolina, South Carolina, and Colorado. As President, Mr. Caplice is responsible for managing and directing the company in addition to his ongoing work.

For the past 21 years, he has served as a consulting environmental engineer for numerous private, public, and non-profit institutions. His responsibilities have included designing and directing various projects, particularly voluntary cleanups of contaminated soil and ground water sites, underground storage tank remediations, and NPL evaluations, investigations, and cleanups. Mr. Caplice has worked extensively on the investigation and cleanup of numerous active and abandoned industrial facilities, landfills, and other waste sites. He has also served as the project manager or senior technical advisor on hundreds of Phase I and Phase II Environmental Assessments at a multitude of sites, from small, undeveloped parcels of property to multi-location industrial facilities. Finally, Mr. Caplice has served as a technical expert on numerous State and Federal cases pertaining to the investigation and cleanup of contaminated properties as well as industrial hygiene and safety related issues pertaining to the investigation and remediation of contaminated property.

Mr. Caplice also has experience in the regulatory analysis of projects for compliance with federal and state environmental regulations, guidance, protocols, and procedures. His environmental regulatory experience includes evaluating compliance of private party actions, reviewing and preparing comments on proposed environmental laws and administrative rules, reviewing site documents and preparing detailed comments, and serving as a technical expert in various environmental cases.
